An individual or a clinician can request release of a patient's raw sequence data.

Raw sequence data refers to unanalyzed sequence data produced from sequencing the individual. Specialized computer software is required to view and interpret this data. The information included in the data files may include incidental findings, potential sequencing artifacts and variants which have not undergone interpretation. Variantyx Inc provides the data with the understanding that it will be used strictly on a research basis, and not for clinical purposes.

Data will be provided in BAM and VCF formats only. Files will be delivered electronically through a portal for download and will be available for 3 months from the date requested.

Patient: _____ DOB: _____ Test/Barcode #: _____

Contact Information (for data delivery):

Phone number: _____

Email*: _____

Address to deliver portable storage: _____

* Files will be shared via Variantyx File Sharing Portal on Citrix Sharefile: VariantyxInc.sharefile.com. Access credentials will be sent to this Email.

Patient/Guardian Consent (signature of a parent or legal guardian is required for individuals under age 18):

I understand that I am requesting my / my dependent's raw sequence data. I understand that I will have access to all of my / my dependent's sequencing information including incidental findings, potential sequencing artifacts and variants which have not undergone interpretation. I understand that any interpretation of the data outside the context of the Variantyx genetic test report is at my/ my dependent's health care provider's discretion and that Variantyx bears no responsibility for the interpretation.
